

## How Electricity is Magnified

### The Secret of Why the UREE Works

The 9<sup>th</sup> Babushka egg concept book was sent to the US White House - President Obama (11-11-11). It quoted 16 different types of electric generators to produce clean perpetual free electricity and mentioned many leftover inventions. Like a totally new transportation system needed for global over-crowded plugged-up cities linked to a cheaper much safer up-side-down "Air"-levitated 500 MPH high speed bullet-train. It resulted three weeks later in a surprise visit for an 80-year old German instrument maker retired in remote redwoods. Two agents from the IRS & State department came to inspect a zero income and a 150 year old renovated sheep barn.

Thus, the first attempt of an *Ultimate Renewable Energy Engine* got a government attention - perhaps to keep the 700 confiscated patents from Nicola Tesla silent, the source of totally "**free Electricity**" When NYC bankers started to print fiat money in 1913 to control ever since a US Government. They prevented a hundred-year-old electricity technology from being improved and only permitted the use of heavy iron-core motors wound with copper wires. But if we replace the heavy iron core and use super-magnets will increase the magnetic field and produce more energy. Thus, 1000 times more electrical energy is technically possible if replaced by super magnets which create a bigger pulse in the windings. To control technology and only use exclusively Oil, they ordered the Patent Office to reject applications and block perpetual motion. However it could be seen in nature like the weather seasons of the Hoover-Dam since 1930. The biggest energy project was designed for a "**Water-media**" to turn huge generators using perpetual available gravity. Conversely Babushka concept shows how electricity became "**portable**" using a compressed "**Air-media**" in tiny UREE generators which is stored in a green bottle like a wheelchair oxygen tank. It works when the pressurized air pushes down a motor piston, but only once to get it started. On the return trip the air is heated up a little with a charged spark plug. Hot air will expand with higher pressure according to physics and so overcome the residual backpressure left in the air tank now replaced **110%** to run a generator forever. In time will adjust a declining Stock Market to obsolete Oil & Coal energy.

For a bigger electric generator we should design a piston made from **Neodymium-Iron-Boron** magnets. That will increase the piston power controlled by external solenoid coils. Faraday's Law generates free electricity by moving a "magnet" piston up and down inside a Tesla coil, to create electricity alternately stored in two capacitors. The collected small energy is enough to be discharged to activate a solenoid coil either on top and bottom switching polarity to reposition push or attract a magnet piston in perpetual motion to amplify free electricity. It works because two energy sources are combined with two thermo-dynamic entropy laws linked to old-fashioned suppressed physics. (**UREE#12, Pearl#216**)

Super-magnets could open up more application possibilities by expanding a low inertia tape drive motor technology. A cheap lower inertia UREE is made from thin-printed boards with etched copper winding, or a ceramic cup with printed basket windings could be turned faster around super-magnets for very big energy conversion. And if the copper loops are discharged by a biased capacitor gets obscene electrical profit for more electrical applications. It could fly again a Concord-airplane, but now an electric-jet profitable with green energy.

In another UREE energy example can be demonstrated when two electric motors are linked with a belt to create "clean free electricity". It is really simple, again once cranked; the first motor will become the driving force and generate free electricity in the belt-driven second motor now function reverse cross wired like a generator will perpetually run the first motor. That is not a mystery, why is it suppressed?

To explain a higher UREE output needs to increase the bias. Just hook together the next wire loops in series and connect a motor to a generator with a flex coupling. Now connect a wire from the motor-**rotor** windings via brushes to the second generator-**stator** in order to amplify or increase the stator magnetic fields will make the rotor running faster and faster. But adding a biased capacitor in between will escalate the power to produce enough for my grandkid's next electric car to run totally free. But cross connect the wires in secret because it is forbidden by many governments so as not to obsolete old-fashioned gasoline cars favored worldwide by the military and bureaucratic regimes linked to an Oil-cartel casino money machines. Notice converted electricity can be deadly dangerous and could reach the critical resonance frequency or blow up. One way or another if not controlled with common sense, as many were murdered by the NYC bankers co-joined by politicians' vice versa military.

A free energy principle is demonstrated in a streetcar motor, which needs a conductor to restrict an energy force once started, or it will run out of control running faster and faster. Explained for my grandkid, originally a streetcar motor was DC wired in a motor-generator combination with overhead wire on top to crank start and stop. But perpetually generated electricity technical does not need an overhead wire, thus fooled the public to create for a hundred years mega profits for the global oil-cartels. The benefiting elected bureaucrats ordered the global Patent Office to block and not allow perpetual motion patents. But now the web shows belt-driven generators running perpetually useful for every automobile, or driving with water split into hydrogen gas. Why is it forbidden worldwide to benefit seven billion people as demonstrated in physics? Even the Internet is full of fake science to keep the next generation uneducated, ignoring a massive environmental worldwide pollution that is now linked to extinction to wipe out all Life on earth. Maybe only Babushka books is teaching forbidden physics mirror imaged in outlawed metaphysics make it clearer, but you need to include divine reality only revealed in the **Torah-Bible**.

## How does Creating More Electricity Work?

The inner workings of generating electricity will match the new Babushka concept egg Donut Atom theory. It is investigating a physical phenomenon and theorized an unheard nuclear situation inside atoms. A new Babushka Atom theory postulated that **Magnetism** is generated by protons moving inside up and down the donut atom center pushed by zillions energized mailman neutrinos coming from an outer Kosmos infinite energy source. Neutrinos will travel at high speed through space to “fuel” passing through every single atom like Life needs energy to turn the lights “on” in galaxies creating a universe. Thus infinite energy bathed in a Time-Space dimension will promote lower entropy which was analyzed by a scientist Fraunhofer a century ago who discovered spectral lines embedded in light. It is still used in many applications similar to forensic science by a police departments explained in forgotten physics.

Once more similar to a dual railroad track, when  $\infty$ -energy is passing through space transformed by electro-magnetic frequencies with a Time-base must travel its journey with divine intelligence on a parallel energy DNA rail. It will balance an entrenched electromagnetic force and stabilize thermo-dynamic entropy laws. Intelligence is still a mystery needed to form atoms, to create genes, being controlled by a human mind. Why ignore a universal metaphysic viewpoint in academia who cannot explain it with science or physics?

Eventual energy controlled by divine intelligence will crystallize into atoms-elements-molecules to start matter for galaxies to become gas-liquid-solid dust on a lower entropy level to radiate **magnetism** 90° from the North-South pole atom axis now squeezed from the inside to the outside donut atom center. It can be explained by an electrical “Three-Finger-Rule” not taught in American trade schools.

Thus, another mystery force called **magnetism** creates free electricity is like a glue to hold or stick molecules together in various patterns directed by intelligence. It is similar to DNA forming 800,000 proteins to create zillions of diversified genes. More is explained in a free Donut Atom Egg #6 expanded to widen a knowledge horizon finalized in (14) Babushka egg concept books. They are ignored in atheistic universities creating a conflict with stupid unscientific evolution fairytales concealing science to cause students to become brain-dead just like their highly paid PhD teachers.

Thus magnetic field lines is still a mystery and travel at the speed of light around the donut-atom going through the center and around, back through the center again like a  $\infty$  math symbol. This **magnetism** theory is confirmed in physics; take a charged copper wire will produce 90° around the wire magnetism. When a wire is formed into a loop, all magnetic lines will be concentrated toward the center creating a denser magnetic field. If disturbed by an additional magnetic force like a permanent magnet will combine to a

higher energy plateau level expressed in bigger pulses. Why is it silenced for 100 years not taught to the next generation?

Therefore, our earth planet is magnetic and is made from many donut atoms magnetically stuck together and behave like a huge magnet forgotten in physics. That can be proven with a compass useful for airplanes-ships or to have fun going camping with kids. But to expand a technology to store magnetism another way is a handy capacitor. It is basically a container similar to a battery but if biased will discharge its stored energy very fast. Applied and useful in technology is the discharge of sparkplug in cars passing stored energy very fast in a hot spark. Thus, a capacitor behaves like the hole in the donut atom storing concentrated energy in the center.

Summed up, some love true physics that should not be explained with fairy tales of stupid lies or outright deception taught worldwide by atheist universities and NASA. Perhaps if they would review once more what was taught five years ago in quantum physics video series #1 to #4 would discover how many science facts they ignored embedded in oldest book, the Torah-Bible?

### The Holographic Universe (Parts 1 & 4)

[https://www.youtube.com/watch?v=IMBt\\_yfGKpU](https://www.youtube.com/watch?v=IMBt_yfGKpU)

<https://www.youtube.com/watch?v=ciJqoTUXRws>

The videos theorized when light passes through a slit will generate interference lines explained in holographic physics not doubled but quadrupled. The same happens when the infinite light energy from space (**Gen.1:1**) crystallized in the Time Dimension. When the Bible Genesis light is passing through a universe time-space slot will thus become visible on a lower entropy. It is expressed in Fraunhofer spectral lines creating atoms forming 100 elements to establish matter linked to the (Second Law of Thermodynamics). Much can be learned from old science no longer taught in universities theorized in Atoms - Babushka books #6 and #9. Infinite light can be transferred by zillions neutrinos and eventually will change into electrons creating free clean electricity. Many old discoveries are now shown on YouTube to better understand prophecy even dated the Apocalypse.

Why is accumulated knowledge still forbidden in every university and even mistranslated in Christian churches? They do not follow the trail of TRUTH like Pontius Pilate standing in front of Yeshua the Christ - the Creator of all Life and never got the answer, “**What is Truth?**” Not having time and pressured by politics to keep his position of power like so many atheistic scientists misled by lies ignoring the metaphysics will freeze lock a comatose Mind.

Many recent YouTube videos demonstrate countless suppressed historic Bible facts recording divine wisdom traced for 6000 years. Every Bible prophecy will now be concluded on the next **Jubilee 5777-5778** starting a new civilization to be ruled forever by **Yeshua-Jesus**, King of Kings and Lords of lords. Why not join him to be safe.
